Troubleshooting Your Computer

- ▶ It may look like your computer has crashed and all your data is lost forever
- ▶ There are a lot of problems that keep you from reaching your data that can be fixed, sometimes in a matter of minutes

Troubleshooting Your Computer

- ▶ Many computer problems appear more serious than they really are
- ▶hard drives do fail – but not very often

Troubleshooting Your Computer

Don't panic!

- ▶ Don't get frustrated & buy a new computer
- ▶ Relax
- ▶ Take a breath
- ▶ Pour yourself a glass or cup of your favorite beverage.....

Troubleshooting Your Computer

- ▶ Once you start troubleshooting, you will want to remember what you have done, so you don't repeat yourself
- ▶ Remember the steps you've taken --write them down
- ▶ If you end up asking someone for help, it will be much easier if they know exactly which steps you've taken

First Step!!

Restart / Reboot

- ▶ Sometimes this is the first thing tech support asks you
- ▶ It's best to be able to say, yes

Restart

- ▶ You and your operating system leave behind a kind of footprint, usually in the form of background processes you don't really need running anymore, or programs that didn't quite close all the way.
- ▶ When you restart your computer, every program and process ends..

Put Your Thinking Cap On

- ▶ Did you install a new program?
- ▶ Download something from the Internet?
- ▶ New hardware?
- ▶ Power Outage?
 - ▶ Yes to any of the above gives you a head start

Make Sure There Really is a Problem

Can't start your computer? Check the basics

- ▶ Check all the cables, connectors, and power cords to make sure they're plugged in securely

Make Sure There Really is a Problem

Wireless Keyboard / Mouse

- ▶ Try another USB port
- ▶ Replace the batteries

Make Sure There Really is a Problem

Surge Protector

- ▶ If you're using a surge protector, make sure it's on and that it works
- ▶ A surge protector may not be working because it is designed to self-destruct
- ▶ When an electric jolt is too much, your surge protector takes the hit, saving your more expensive hardware from the surge

Make Sure There Really is a Problem

- ▶ Plug something else into the surge protector to make sure there isn't a power problem.

Make Sure There Really is a Problem

► Circuit Breaker?

No Internet Access

Check with ISP re outage

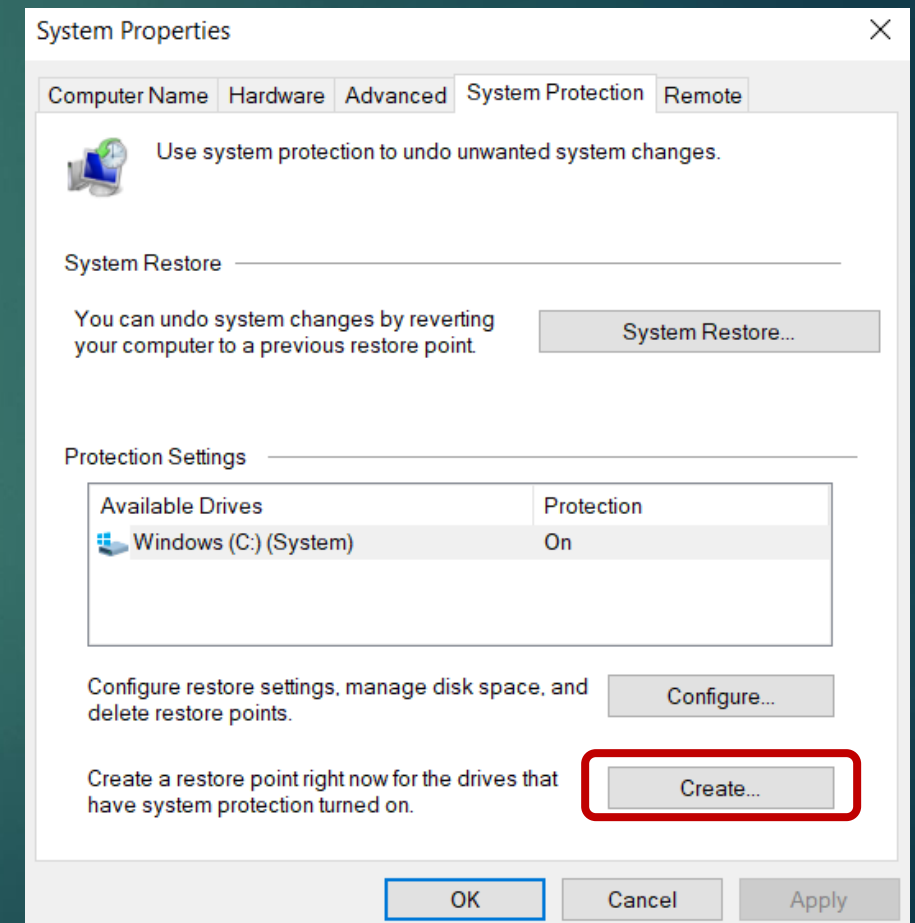

- ▶ Plug computer directly into your router
 - ▶ Ethernet cable
- ▶ Unplug router
 - ▶ Wait for 30 seconds
 - ▶ Turn back on
- ▶ Regularly reboot your router & modem

No Internet Access

- ▶ Still no Internet access
 - ▶ How old is your router?
 - ▶ Don't forget to change log-in / password

Important Step!!

- ▶ Before you start your troubleshooting, create a Restore Point – just in case
- ▶ In Search Box, type Create a Restore Point
- ▶ Create / Give it a name

No More Bloat

- ▶ Uninstall programs you no longer use
- ▶ Sort by date to see if you have downloaded unwanted programs

Hard Drive Makes Grinding Noises

- ▶ Early sign your drive is dying
- ▶ Five minutes or 5 weeks
- ▶ Back up your files ASAP OR
- ▶ Create an image of your HD
- ▶ Buy new HD / copy image from external hard drive
- ▶ OR
- ▶ Buy new computer / install programs / copy files from external storage

Beep Codes

- ▶ The beeping sequence is a coded message (beep code) designed to tell the user (really your tech) what is wrong with the computer

BIOS Beep Codes List

Beep Codes for the two most used brands **AMI systems** and **Phoenix systems**

AMI Beep Codes

- **1 beep** - DRAM refresh failure. There is a problem in the system memory or the motherboard.
- **2 beeps** - Memory parity error. The parity circuit is not working properly.
- **3 beeps** - Base 64K RAM failure. There is a problem with the first 64K of system memory.
- **4 beeps** - System timer not operational. There is problem with the timer(s) that control functions on the motherboard.
- **5 beeps** - Processor failure. The system CPU has failed.
- **6 beeps** - Gate A20/keyboard controller failure. The keyboard IC controller has failed, preventing gate A20 from switching the processor to protect mode.
- **7 beeps** - Virtual mode exception error.
- **8 beeps** - Video memory error. The BIOS cannot write to the frame buffer memory on the video card.
- **9 beeps** - ROM checksum error. The BIOS ROM chip on the motherboard is likely faulty.
- **10 beeps** - CMOS checksum error. Something on the motherboard is causing an error when trying to interact with the CMOS.
- **11 beeps** - Bad cache memory. An error in the level 2 cache memory.
- **1 long beep, 2 short** - Failure in the video system.
- **1 long beep, 3 short** - A failure has been detected in memory above 64K.
- **1 long beep, 8 short** - Display test failure.
- **Continuous beeping** - A problem with the memory or video.

Computer Keeps Restarting

- ▶ Components within your system may be overheating
- ▶ Make sure the vents in the case are not blocked
- ▶ Confirm there is good air flow around the computer
- ▶ Clean your fan(s) OR
- ▶ It could be your Power Supply is dying
- ▶ Time for a tech

Computer Keeps Restarting

- ▶ Must have to clean vents plus....
 - ▶ Screen
 - ▶ Keyboard(s)
 - ▶ Mouse
 - ▶ Case

Computer is Running Slow

[View optional updates](#)

Feature update to Windows 10, version 21H1

The next version of Windows is available with new features and security improvements. When you're ready for the update, select "Download and install."

[Download and install](#) [See what's in this update](#)

Computer is Running Slow

Monthly Quality Updates (Patch Tuesday)

- ▶ AKA "cumulative updates"
- ▶ Mandatory updates that your computer downloads and installs automatically every month through Windows Update.

Computer is Running Slow

Feature Updates

- ▶ Now—21 (year) H1 (year=1st half or H2 =2nd half)
- ▶ New versions of the OS, which are available twice a year, during spring and fall time frame. Supported for 18 months
- ▶ After the support cycle ends, you must upgrade to a supported version to continue getting security and non-security patches.

Computer is Running Slow

Feature Updates (cont.)

- ▶ Microsoft recommends creating a full backup or at least a backup of your files before installing a feature update—but it isn't necessary.

Time to Clean Your HD

Disk Cleanup

Clean up system files

If you have Windows ESD installation files, DO NOT delete them. ESD Files are used for “resetting your PC” to its factory settings.

Time to Clean Your HD

Windows 10 Storage Sense

- ▶ Storage Sense can automatically free up space by getting rid of files you don't need
 - ▶ Temporary files
 - ▶ Content in the recycle bin....
- ▶ Settings > System > Storage
- ▶ Scroll through list
- ▶ Check types of data you want to remove

Time to Clean Your HD

Windows 10 Storage Sense

- ▶ Scroll through list
- ▶ Check types of data you want to remove
- ▶ Can delete everything listed if computer is working properly

Time to Clean Your HD

I like to decide what I want to remove so I have turned *automatically free up space* off

Storage

Windows can automatically free up space by getting rid of files you don't need, like temporary files and content in your recycle bin

[Change how we free up space automatically](#)

[Free up space now](#)

Time to Clean Your HD

Free up space now

Remove temporary files

Choose which items you'd like to permanently remove to free up disk space.

Remove files

Total selected: 3.73 GB

☐ **Downloads** 33.9 GB
Files in your Downloads folder.

☒ **Windows Update Cleanup** 3.32 GB

Windows keeps copies of all installed updates from Windows Update, even after installing newer versions of updates. Windows Update cleanup deletes or compresses older versions of updates that are no longer needed and taking up space. (You might need to restart your computer.)

This is where you decide what you want to delete

Time to Clean Your HD

Storage Sense

Storage Sense runs automatically when you're low on disk space. We cleaned up 1.85 GB of space in the past month.

Run Storage Sense

Every week

Every day

Every week

Every month

During low free disk space

Temporary Files

☒ Delete temporary files that my apps aren't using

Delete files in my recycle bin if they have been there for over

30 days

Delete files in my Downloads folder if they have been there for over

Never

Time to Clean Your HD

Computer is Running Slow

Clean your Registry

- ▶ If you have followed all the HD cleaning steps and your computer is still slowly try running a registry cleaner
- ▶ I use CCleaner's Registry cleaner

Sometimes You Have to Refresh Your Computer

- ▶ Refresh your PC to reinstall Windows and keep your personal files and settings.
- ▶ Refresh also keeps the apps that came with your PC and the apps you installed from the Microsoft Store.
- ▶ You will need to reinstall all of apps you downloaded
- ▶ Back up your data!!

Sometimes You Have to Refresh Your Computer

► Settings > Update and Security > Recovery

Reset this PC

If your PC isn't running well, resetting it might help. This lets you choose to keep your personal files or remove them, and then reinstalls Windows.

Get started

Choose an option

Keep my files

Removes apps and settings, but keeps your personal files.

Remove everything

Removes all of your personal files, apps, and settings.

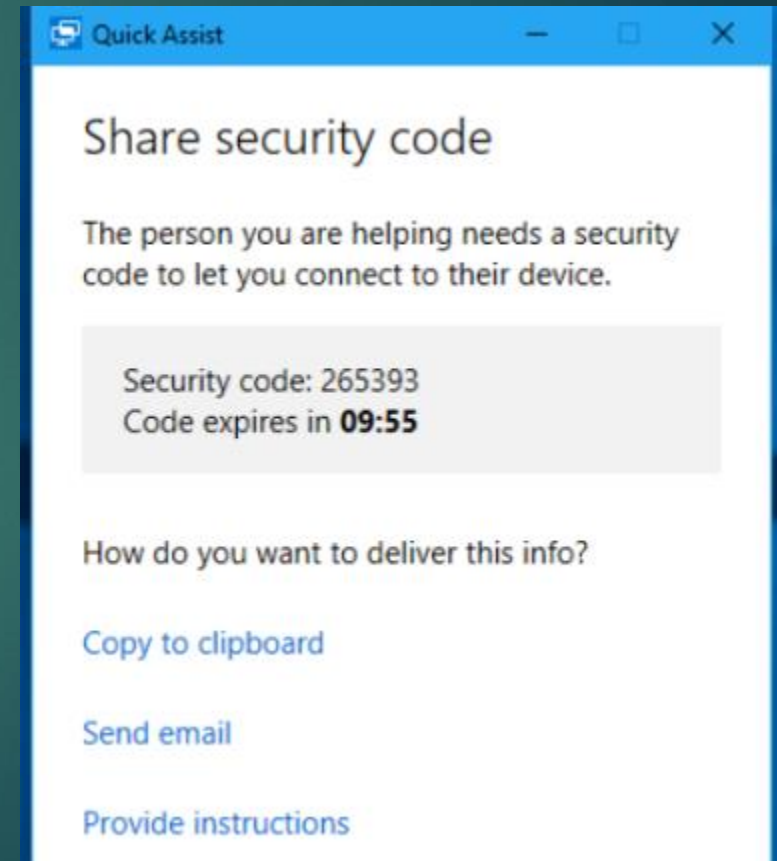

- Click Get Started
- Follow the instructions

Using Windows' Quick Assist

- ▶ Enables two people to work together over a remote connection
- ▶ Allow someone you trust to assist you by taking control of your computer
- ▶ Or, for you to assist another person

Using Windows' Quick Assist

- ▶ Sign in with your Microsoft account
- ▶ You'll receive a security code
- ▶ 10 minutes before it expires

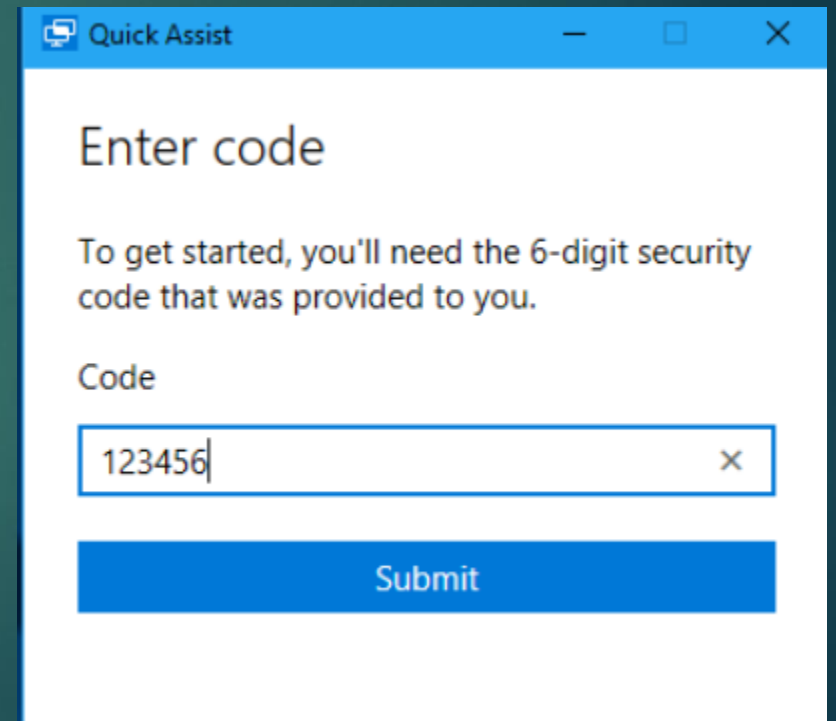

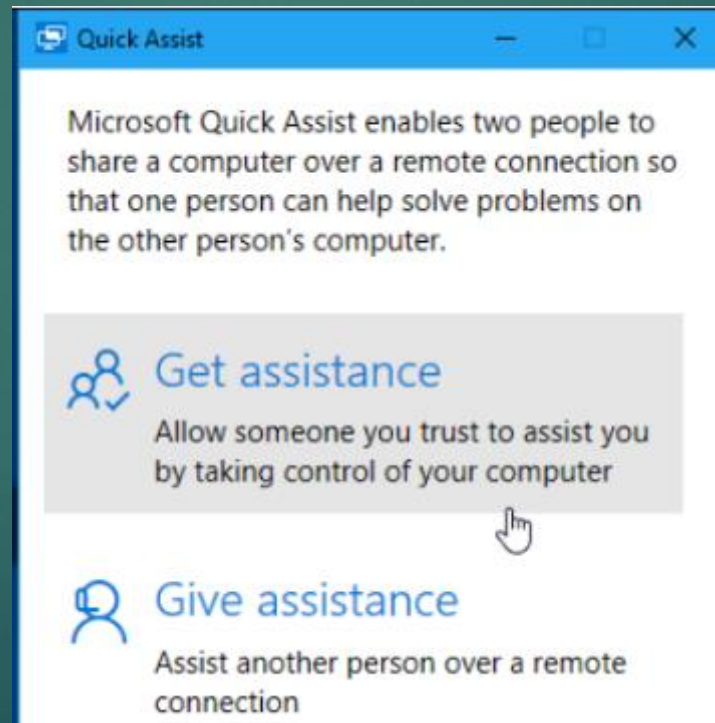

Using Windows' Quick Assist

- ▶ Need to 'talk' the other person through opening the Quick Assist app?
 - ▶ E-mail
 - ▶ Text message
 - ▶ Phone
- ▶ Other person types "Quick Assist" into the Win 10 search box
- ▶ Quick Assist app launches

Using Windows' Quick Assist

- ▶ Click on Get assistance
- ▶ Enter security code
- ▶ Click Submit

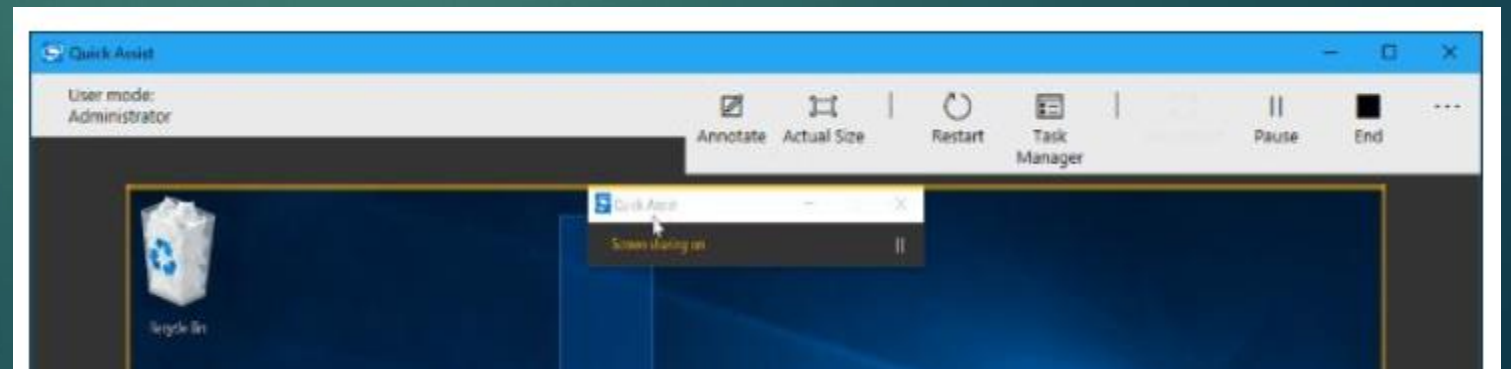

Using Windows' Quick Assist

- ▶ Connection established
- ▶ Might take a while for devices to connect
- ▶ Be patient
- ▶ You'll see the other person's desktop in a window on your computer

Using Windows' Quick Assist

- ▶ Icons are in the top right corner
 - ▶ Draw on the screen
 - ▶ Change size of window
 - ▶ Remotely restart computer
 - ▶ Open task manager
 - ▶ Pause or end QA connection

Use TeamViewer or AnyDesk

TeamViewer

AnyDesk

Browse for Help aka Google is your friend

Be specific

- ▶ Include:
 - ▶ Operating system
 - ▶ Program name and version
 - ▶ Problem you encountered
 - ▶ Circumstances when the problem occurred
- ▶ OR copy/paste/type Error Code or message in the search box

Browse for Help

- ▶ If other people are having the same problem, you'll be able to see if they have a solution - <https://www.cnet.com/forums/windows-10/>
